Overview

Agency fees can be added to a PNR using the Travel Agency Service Fee (TASF) facility provided by the Airline Reporting Corporation (ARC). TASFs are created using the TravelAgentServiceFees_# transaction.

The steps to add a TASF to an existing PNR are:

1. Start a host session.

2. Retrieve the PNR.

3. Issues the TASF (if successful, end transacts the PNR).

4. End the host session.

Starting a Host Session

Start a host session by calling the *BeginSession* method of the XML Select Web Services (XWS). Your Host Access Profile (HAP) is required to access XWS.

The *BeginSession* method returns a session token, which is then used for the subsequent session requests (see the **API Developer Notes:** *Galileo Web Services Host Sessions* for details).

Retrieving the PNR

Use PNRBFManagement_# request to retrieve the desired PNR. You must include the record locator in the PNRBFManagement request.

```
<PNRBFManagement_#>
        <PNRBFRetrieveMods>
                <PNRAddr>
                        <FileAddr/>
                        <CodeCheck/>                    Record Locator
                        <RecLoc>JGJ25W</RecLoc>
                </PNRAddr>
        </PNRBFRetrieveMods>
        <FareRedisplayMods>
                <DisplayAction>
                        <Action>D</Action>
                </DisplayAction>
        </FareRedisplayMods>
</PNRBFManagement_#>
```

Issuing the Travel Agency Service Fee (TASF)

After you retrieve the PNR, use the TravelAgentServiceFees_# transaction request to create the TASF. You must enter:

- The passenger name.

- The amount of the service fee.

- The currency in which the service fee will be charged.

- Credit card data for the passenger.

The PNR provides basic information, but the service fee information, <ServiceFeeInfo>, comes from your agency policies.

TASF Request

```
<TravelAgentServiceFees_#>
        <ServiceFeeMods>
                <ServiceFeeInfo>
                        <Name>JOHN.SMITH</Name>                 FirstName.LastName
                        <Amt>25.00</Amt>                        Service fee amount
                        <CurrencyCode>USD</CurrencyCode>
                        <RelatedTktNum></RelatedTktNum>
                </ServiceFeeInfo>
                <CreditCardFOP>
                        <ExpDt>0307</ExpDt>
                        <Vnd>AX</Vnd>
                        <Acct>300000000000000</Acct>
                        <AdditionalInfoAry>
                                <AdditionalInfo>
                                        <ID>1</ID>              1 = Credit card
                                                                approval code
                                        <Dt>4098</Dt>           Credit card approval
                                                                code value
                                </AdditionalInfo>
                        </AdditionalInfoAry>
                </CreditCardFOP>
        </ServiceFeeMods>
</TravelAgentServiceFees_#>
```
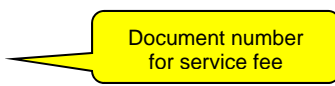

TASF Response

A successful TASF response end transacts the PNR.

```
<TravelAgentServiceFees_# xmlns="">
        <ServiceFee>
                <RecordLocator>
                        <RecLoc>JGJ25W</RecLoc>
                </RecordLocator>
                <TicketNumInfo>
                        <PrimeTktNum>8909900292971</PrimeTktNum>
                        <ConjunctiveTktNum/>
                        <NumTkts/>
                </TicketNumInfo>
        </ServiceFee>
</TravelAgentServiceFees_#>
```

Document number for service fee

Ending the Host Session

End the host session by calling the *EndSession* method of GWS.
